- **Rated DC Current :** Value defined when DC current flows and the initial value of inductance has decreased by 30% or when current flows and temperature has risen to 40°C whichever is smaller.
- **Idc1[Isat] :** The DC saturation current value is specified when the decrease of the initial inductance value at 30%.
- **Idc2[Irms] :** The temperature rise current value is specified when temperature of the inductor is raised 40°C by DC current.
- **Operating temperature range :** - 40 to +125°C (Including self-temperature rise)
