

Document No.	IE-SP-131
Released Date	2021/06/22
Page No.	1

1 Scope:

- 1.1 This specification is applicable to lead free and halogen free of RoHS directive for RTH series high power Low-Resistance thick film chip resistors.
- 1.2 The product is for general electronic purpose.

3.1 Power Derating Curve:

Operating Temperature Range: -55° C ~ $+155^{\circ}$ C

If the ambient temperature exceeds 70 degrees centigrade to 125 degrees centigrade, the power can be modified by the curve as below.

3.2 Current Rating

Rated Current: The resistor shall have a DC continuous working current or a rms. AC continuous working current at commercial-line frequency and wave form corresponding to the power rating, as determined from the following:

$$I = \sqrt{P/R}$$

 $\stackrel{\text{I= Rated current (A)}}{\stackrel{\text{P= Power rating (w)}}{\stackrel{\text{R= Nominal resistance}(\Omega)}}$

Item	Conditions	Specifications
nem	Conditions	Resistors
	Test1:The resistor mounted on the board applied 5N	Test1:No evidence of mechanical
	pushing force on the sample rear for 10sec.	damage.
Terminal	Test2:The resistor mounted on the board slowly add	-
Strength	force on the sample rear until the sample	Test2: F≧5N
Ū	termination is breakdown.	
	Refer to JIS-C5201-1 4.16	
	The tested resistor be immersed into isopropyl alcohol	∆R%=±2.0%
	of 20~25 $^\circ\!\!\mathbb{C}$ for 5 minutes, then the resistor is left in the	
Resistance to	room for 48 hrs, and measured its resistance variance	
Solvent	rate.	
	Refer to JIS-C5201-1 4.29	
		Solder coverage over 95%
	Put the tested resistor in the apparatus of PCT, at a	
	temperature of 105 $^\circ_{\mathbb{C}}$, humidity of 100% RH, and	
	pressure of 1.22×10 ⁵ Pa for a duration of 4 hours.	
	Then after left the tested resistor in room temperature	
	for 2 hours or more.	
Solderability	Test method:	
	The resistor be immersed into solder pot in	
	temperature 235 \pm 5 $^{\circ}$ C for 2 sec, then the resistor is left	
	as placed under microscope to observed its solder	
	area.	
	Refer to JIS-C5201-1 4.17	
		Test item 1:
	The tested resistor be immersed into molten solder of	
	$260+5/-0^{\circ}$ °C for 10+1/-0 seconds. Then the resistor is	$\triangle R\% = \pm 2.0\%$
	left in the room for 1 hour.	
		Test item 2:
	⊙Test method 2 (solder pot test):	(1).Solder coverage over 95%.
		2).The underlying material (such as
	$260+5/-0^{\circ}$ °C for $30+1/-0$ seconds. Then the resistor is	ceramic) shall not be visible at the creation
	left as placed under microscope to observe its solder	corner area of the electrode.
Resistance to		
Soldering Heat		Test item 3:
	⊙Test method 3 (Electric iron test):	(1).Variance rate on resistance
	Preheating temperature : $350\pm10^{\circ}$	△R%=±2.0%
	Electric iron preheating time : 3+1/-0 sec	
	Preheating the electric iron on electrode termination,	
	as after that step placed the iron over 60 min. and	
	measured its resistance variance rate.	
	Refer to JIS-C5201-1 4.18

6.3 Environmental Test

Item	Conditions	Specifications
		Resistors
Dry Heat	Put tested resistor in chamber under temperature 155±5°C for 1000 +48/-0 hours. Then leaving the tested resistor in room temperature for 60 minutes, and measure its resistance variance rate. Refer to JIS-C5201-1 4.25	1%、5%: △R%=±2.0%
	Put the tested resistor in the chamber under the Thermal Shock which shown in the following table shall be repeated 300 times consecutively. Then leaving the tested resistor in the room temperature for 1 hours, and measure its resistance variance rate.	1%、5%: ∆R%=±2.0%
Thermal Shock	Testing Condition	
	Lowest Temperature -55±5℃	
	Highest Temperature 125±5℃	
	Temperature-retaining time 15 minutes each	
	Refer to MIL-STD 202 Method 107	
Loading Life in Moisture	Put the tested resistor in the chamber under temperature 40±2°C, relative humidity 90~95% and load the rated current for 90 minutes on, 30 minutes off, total 1000 hours. Then leaving the tested resistor in room temperature for 60 minutes, and measure its resistance variance rate. Refer to JIS-C5201-1 4.24	
Load Life	Put the tested resistor in chamber under temperature $70\pm2^{\circ}$ and load the rated current for 90 minutes on, 30 minutes off, total 1000 hours. Then leaving the tested resistor in room temperature for 60 minutes, and measure its resistance variance rate. Refer to JIS-C5201-1 4.25	1%、5%: △R%=±3.0%

Document No.	IE-SP-131
Released Date	2021/06/22
Page No.	10

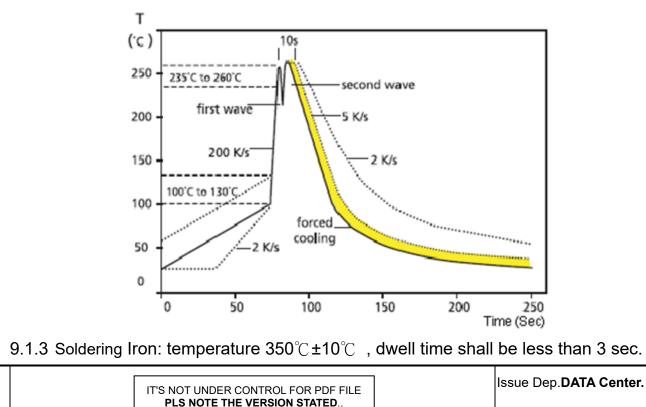

Series No.60

- 9 Technical application notes: (This is for recommendation, please customer perform adjustment according to actual application)
 - 9.1 Recommend Soldering Method:
 - 9.1.1 Lead Free IR Reflow Soldering Profile

Remark1:Recommended IR Reflow Soldering Profile meet J-STD-020D. Remark2:The peak temperature of soldering heat is 260 +5/-0 $^{\circ}$ C for 10 seconds.

9.1.2 Lead Free Double-Wave Soldering Profile. (This applies to 0603 size inclusive above products)

Do not copy without permission

Document No.	IE-SP-131
Released Date	2021/06/22
Page No.	11

9.2 Recommend Land Pattern Design (For Reflow Soldering):

When a component is soldered, the resistance after soldering changes slightly depending on the size of the soldering area and the amount of soldering. When designing a circuit, it is necessary to consider the effect of a decrease or increase in its resistance.

9.3 Environment Precautions:

This specification product is for general electronic use, ABCO will not be responsible for any damage, cost or loss caused by using this specification product in any special environment. If other applications need to confirm with ABCO.

If consumer intends to use our Company product in special environment or condition (including but not limited to those mentioned below), then will need to make individual recognition of product features and reliability accordingly.

- (a) Used in high temperature and humidity environment
- (b) Exposed to sea breeze or other corrosive gas, such as Cl2
 H2S
 NH3
 SO2 and NO2.
- (c) Used in non-verified liquids including water, oil, chemical and organic solvents.
- (d) Using non-verified resin or other coating material to seal or coat our Company product.
- (e) After soldering, it is necessary to use water-soluble detergents to clean residual solder fluxes, even though no-clean fluxes are recommended.

9.4 Momentary Overload Precautions:

The product might be out of function when momentary overloaded. Please make sure to avoid momentary overloading while using and preserving \circ

Remark	IT'S NOT UNDER CONTROL FOR PDF FILE PLS NOTE THE VERSION STATED	Issue Dep. DATA Center.
	Do not copy without permission	Series No. 60

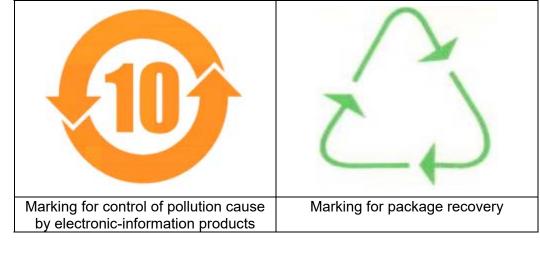

RTH Series Low-Resistance Thick Film Chip Resistors Product Specification

- 9.5 Operation and Processing Precautions:
 - (a) Avoid damage to the edge of resistor and protective layer caused by mechanical stress.
 - (b) Handle with care when printing circuit board (PCB) is divided or fixed on support body, because bending of printing circuit board (PCB) mounting will make mechanical stress for resistors.
 - (c) Make sure the power rating is under the limit when using the resistor. When power rating is over the limit, the resister will be overloaded. There might be machinery damage due to the climbing temperature.
 - (d) If the resister will be exposed under massive impact load (shock wave) in a short period of time, the working environment must be set up well before use.
 - (e) Please make evaluation and confirmation when the product is well used in your company and have a through consideration of it's fail-safe design to ensure the system safety.

10 Storage and transportation requirement:

- 10.1 The temperature condition must be controlled as 25±5℃, the R.H. must be controlled as 60±15%. The stock can maintain quality level in two years.
- 10.2 Please avoid the mentioned harsh environment below when storing to ensure product performance and its' weldability. Places exposed to sea breeze or other corrosive gas, such as Cl2 < H2S < NH3 < SO2 and NO2.
- 10.3 When the product is moved and stored, please ensure the correct orientation of the box. Do not drop or squeeze the box. Otherwise, the electrode or the body of the product may be damaged.

11 The carton packaged for electronic-information products is made by the symbol as follows: (For china)
